

## SARS- CoV2 TESTS: PCR- and Antigen- Self-Collection - convenient, simple in handling and approved

Who would not wish that, SARS- CoV2 and its siblings off into a bubble, and sent forever into space or even further. But this will probably not happen. It does not need to. Viruses and bacteria belong to us and to our environment, and responsible handling of them is crucial.

In addition to the AHAs and the recurring lockdowns, all hopes are now pinned on vaccination.

But this hope is probably not yet the desired silver lining at the horizon. In addition to the quantity, it is above all the quality of the vaccination that, as is now increasingly showing that the quality of the vaccination does not meet the quality requirements, and the mortality rate is significantly higher than has been shown in the studies. Both criteria are already causing the timetable is already wavering.

It is probably no longer possible to impose such restrictions on travel for the citizens of Europe, and worldwide, because people want to travel, but not everyone wants to or can be vaccinated. Especially since the travel industry has done an incredible amount to make travel safe and reliable.

Testing, either PCR or antigen testing depending on entry requirements, has so far been both a significant hurdle both financially and in terms of convenience.

We, at Holistic Health Travel, would like to provide our guests with relief at least at this point with PCR and antigen tests that can be taken in the comfort of their own home or office, without the need for a swab. The same is valid at their destination.

The samples for the PCR test will be collected by us and sent to the laboratory in Austria by TNT. We cooperate with SGS Fresenius in Wörgl, AUT, who have developed the so-called "gargle test". At SGS the amplification cycles are limited to a uniform standard and your data are safe.

The rapid antigen test is similar in terms of the collection procedure, but the guest drips the saliva into the box of the test kit. We use the control box to issue the certificate, which must be carried on entry into Germany. Germany is the only country that allows the antigen test upon entry.\* At the present time, Germany does not require a test for re-entry. All other European countries require a negative PCR test for entry.

The prices consist of test kit, laboratory evaluation and transport, and are graded according to the location of the pickup.

Our service for you is that we already offer the guest a test kit for the outbound journey, i.e. entry in Spain, and thus save him the journey and queuing in any test facilities.

test facilities. And as well on the vacation site itself, one does not need to sacrifice valuable vacation time, for visiting a test center. And in terms of price, we are competitive.

And also at your accommodation site everything is prepared for your safety.
